Education

Indian Institute of Technology Dharwad

Bachelor of Technology in Computer Science

August 2019 – May 2023

Dharwad, Karnataka

Technical Skills

Languages: Java 21, C/C++, Javascript (ES6+), SQL, HTML/CSS

Technologies: Spring Boot, ReactJS, Recoil, NodeJS, RabbitMQ, Redis, Hibernate, MySQL, MongoDB

Tools: Docker, Linux (Alpine), Shell/PowerShell, Git, IntelliJ, GitHub Actions

Familiar: Kubernetes, Apache Kafka, System Design (HLD/LLD), Data Structures & Algorithms

Experience

Software Engineer 2

Verizon

April 2025 – Present

Hyderabad, Telangana

- Built an event-driven microservices platform using **Java 21 and Spring Boot**, leveraging **RabbitMQ** for messaging and **Redis** for caching; integrated a **retry suite** with exponential backoff and Dead Letter Queues (DLQ) to ensure data reliability.
- Deployed containerized Java 21 services using **Docker on Alpine Linux**, optimizing startup times via volume mounts and securing credentials with **Jasypt encryption** for the Publisher-Consumer-Persistence stack.
- Migrated legacy MS SQL Server to a **high-availability MySQL Cluster**, eliminating enterprise licensing costs; improved throughput by tuning **JVM heap settings** and Hibernate L2 caching for high concurrent loads.
- Developed a high-concurrency **IP Inventory engine in Node.js** using asynchronous processing; utilized parallel ICMP pings and reverse DNS lookups to reduce manual audit time from **5 days to 40 seconds**.
- Built a monitoring suite for **MySQL Router** using Shell and PowerShell scripts; automated health checks and parallel service restarts to ensure **zero-downtime** database connectivity.
- Developed a Java-based sync engine for **LDAP and Google/Slack APIs**, implementing exponential backoff for rate-limiting and optimizing resource utilization for high-volume user migrations.

Technical Analyst (SDE)

Fiserv (Fiserv India Ltd.)

July 2023 – March 2025

Bengaluru, Karnataka

- Contributed to **Architect**, a multi-tenant banking framework used by **1800+ banks**; focused on scaling core components and improving reliability for high-volume financial transactions.
- Built **FDIC-compliant UI features** using React and Recoil, providing dynamic account protection visibility for end-users based on real-time regulatory data.
- Optimized 15+ **REST APIs in Spring Boot**, achieving a **20% performance gain** through logic refactoring and database query optimization.
- Migrated legacy **SOAP integrations to REST**, cutting service latency by **25%** and improving compatibility with modern downstream banking systems.
- Resolved production bugs and **P1/P2 incidents**, reducing client-reported issues by **20%** while maintaining a **95% resolution rate** for high-priority tickets.

SDE Intern

Optum (Optum Global Solutions, UHG)

May 2022 – June 2022

Hyderabad, Telangana

- Developed 10+ **RESTful API endpoints** to validate insurance claims, increasing claim validation accuracy by **25%**.
- Applied advanced business rule exclusions to determine claim validity, reducing erroneous claims by **15%** and expediting processing timelines.
- Authored technical documentation, including API usage guidelines and business logic flowcharts to streamline developer onboarding.

Projects

Mall & Brand Management Portal — Saleh Al Othaim Investment

2025

- Built a management portal for malls across **Saudi Arabia** using PHP and MySQL; handled brand listings, store ratings, locations, and multi-tenant user management.
- Developed store deal timelines and promotional features; integrated **AWS S3** for image hosting and digital asset management.
- Managed deployments on **AWS EC2**, maintaining staging and production environments to ensure system reliability and uptime.
